## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claim 3, drawn to a cDNA chip specifically including actin, beta-myosin, glycogen phosphorylase, myosin heavy chain, pyruvate kinase and tropin C coding genes, classified in class 435, subclass 287.1.
  - II. Claim 4, drawn to a cDNA chip specifically including 1-alpha dynein heavy chain, 601446467F1, fibronectin precursor and MHC class I coding genes, classified in class 435, subclass 287.1.
2. Claims 1, 2, and 5 link(s) inventions I and II. The restriction requirement between the linked inventions is subject to the nonallowance of the linking claim(s), claims 1, 2, and 5. Upon the indication of allowability of the linking claim(s), the restriction requirement as to the linked inventions shall be withdrawn and any claim(s) depending from or otherwise requiring all the limitations of the allowable linking claim(s) will be rejoined and fully examined for patentability in accordance with 37 CFR 1.104. Claims that require all the limitations of an allowable linking claim will be entered as a matter of right if the amendment is presented prior to final rejection or allowance, whichever is earlier. Amendments submitted after final rejection are governed by 37 CFR 1.116; amendments submitted after allowance are governed by 37 CFR 1.312.

Applicant(s) are advised that if any claim(s) including all the limitations of the allowable linking claim(s) is/are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C.

Art Unit: 1634

121 are no longer applicable. In re Ziegler, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

The inventions are distinct, each from the other because of the following reasons:

3. In the instant case the different inventions, each characterized by a different specific particular collection of genes, neither recites nor requires the other collection of specifically named genes. For example, the cDNA chip of claim 3 requires the 6 specifically recited ESM-specific genes, but does not specifically require any other particular genes. Similarly, the cDNA chip of claim 4 requires the 4 specifically recited ASM-specific genes, but does not specifically require any other particular genes.

Furthermore, the different collections of specifically named genes are distinct in that they are composed of different nucleic acid sequences. Because they are composed of unique sequences, each collection would require its own search, and a reference against one collection would not necessarily be a reference against any other collection.

4. Because these inventions are distinct for the reasons given above and because the inventions characterized by claims 3 and 4 require different searches that are not coextensive, examination of these claims would pose a serious burden on the examiner and therefore restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1634

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
